Question 5. Define Favicon and give an illustrative example

Answaer-

A favicon, short for "favorite icon," is a small, 16x16 pixel icon that appears next to the URL in the address bar, or on a tab, when you visit a website. It is also found on your browser's bookmark bar, history and in search results, alongside the page url. Favicons are usually 16x16 pixels, but they can be up to 512x512 pixels. They should be in PNG, GIF, or ICO format.

To create a favicon, you can use a favicon generator website like [URL Favicon Generator]. These websites will allow you to upload an image or create a custom favicon from scratch. Once you have created your favicon, you will need to upload it to your website's root directory.

Here are some examples of favicons:

- The Google favicon is a blue and white globe with the letter "G" in the middle.
- The Facebook favicon is a blue "f" on a white background.
- The Twitter favicon is a blue bird on a white background.
- The YouTube favicon is a red "play" button on a white background.
